3. How to select Product Codes
4. Navigating through the Product Code tree structure
5. Oil and Gas Product and Service Codes overview

Adding Product Codes and Key Words

Ensuring that your company registers under the product and service codes that match your capabilities is one of the most important aspects of completing the questionnaire.

The product and service codes are the primary means for buyers to source suppliers and/or contractors to match their contract requirements.

It is essential to give careful consideration and allow adequate time to review all of the available product and service codes and keywords, in order to maximise your company's chances of being identified by a buyer for a relevant contract opportunity.

Introduction

Key Words

Once you have identified the right product codes, remember to check for available keywords.

Many product and service codes have a selection of keywords, which are designed to make identification of the correct codes easier for suppliers, contractors and buyers. The keywords have been selected by the buying organizations to help ensure they source the most appropriate suppliers for tender opportunities.

The keywords work by providing a further level of classification to the product and service code, which can sometimes be quite generic. These are listed in grey text beneath the code in the guide book, and are often incorporated into the user's search criteria.

Where keywords do not exist, or existing keywords are inappropriate, you may enter your own description.

Example – how to use keywords

1.5.9 Propulsion Units and Accessories

Aero

Land

Marine

Prime movers

Thrusters

Underwater

In the above example, 1.5.9 is the correct code for a supplier of Propulsion Units and Accessories. The keywords clearly enable suppliers to demonstrate the specific type of propulsion unit they can provide (you can select one or all of the keywords as appropriate).

How to select product and service codes for your organisation

This guide provides all the product and service codes and their associated keywords.

There are four tiers in the coding structure which are divided into the following areas:

1. Products / Equipment / Materials
2. Products / Equipment / Materials (Continued)
3. Services
4. Multidiscipline / combined supplies and / or Services (Turnkey/Packages)

Each area is sub-divided into a number of subsections, listed on p.7.

Navigating through the Product Code tree structure

In the system, to select your organisation's product codes, you will need to navigate through a tree structure:

- Level 1 – the highest and most general category.
- Level 2 – subcategories giving a greater level of detail.
- Level 3 – individual products and services – this is the level to choose to indicate what products and services your organisation can supply
- Level 4 (keywords) – further division of the individual products and services to give a greater level of granularity– this may help buyers identify suppliers who provide a particular type of the level 3 product or service

If you are not sure which section contains a particular product code, a free text search option is available. Remember that Achilles codes are not a Bill of Materials but exist to enable buyers and suppliers to begin a conversation. The product codes may not be an exact match to the products that your organisation provides, so think in terms of 'categories' rather than specifics when looking for a code. The codes do not use trade names, so search for a generic term (sticky tape) rather than a trade or brand name (Sellotape).

For further guidance on how to select product codes, please see the

'How to join a buyer's supplier registration system'.
